

Futura

Symphony 3.3

⇓
var/cache *vs* var/tmp
temporary files.

cache : clear *and* cache : warmup

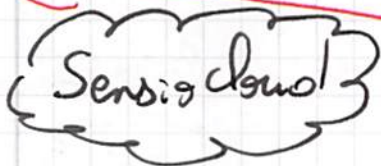

Code/data/Services

⇒ Env variables.

Improvement in Symphony 3.2.

infrastructure config

↳ Define dependancies
php or not php relative

} only config files!

config
cache:
type: redis

on your git!
in a safe way.

Available 2017

New cache system Symphony PSR-6

PSR6 = caching interface

Common interface

no collision with no collision interface
...

Zend Framework
→ Sonata
Laravel
→ illuminate

is hit() → true or false if it exist in the cache
if you want null value.

save deferred() ⇒ write deferred

Packageist

↳ cache - implementation

Symfony goals 3.1 
strict PSR-6 implementation.

Cache adapter

• APCU • array
• Filesystem • Redis
Default

chainAdapter

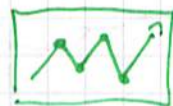

⊆ Abstract adapter

↑ Pools ↑

Many pools by subsystems.

↳ symfony config

Performance

Set	items
Doctrine	834 ms
PHP Cache	313 ms
Stash	55 ms
Symfony	533 ms

yet

By default

• cache: app
• cache: system
