Make your code do your job

Typing is COOL :)

Kafka will get the message across

(Apache)   ~~queue~~   ~~pubsub~~   (Write ahead log)

1. create 'foo'
2. create 'foo'
3. delete 'foo'
   } Couch db
   postgres (internally)

{ never corrupt   read sequentially
  ↳ = = Super FAST }
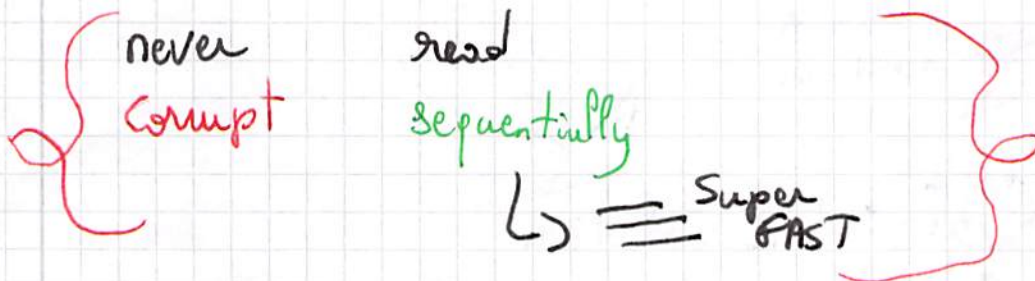

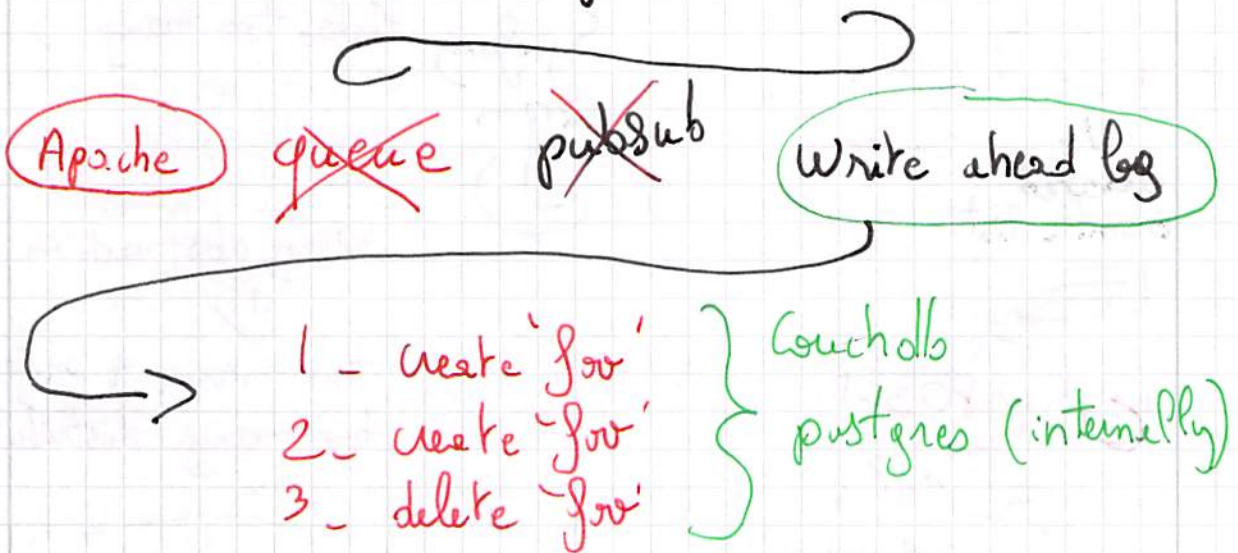

TOPIC
=
streams of messages

Extract

messages from ~~consume~~ with Consumers. partition => Scale

[Everything is retained]

(message based on key goes to...)

Symfony problems
Keynote 2
! •

Scaling Cumbersome

Clean when remove bundle
→ not documented
→ manual effort

No curated bundle list
Lots of choices! too many?

Symfony edition
Makes too many? or too few choices?

Distribution is wrong abstraction
⇓
too many # projects!
too many distributions!

COMPOSER is SLOW!
→ downloads!
Package of dependancies

* Beware * the solution

Symfony Flex
Composition over inheritance
• Install best bundles by alias → what you need
• Personnelised solution depending of your project
• Much more automatized!
↳ config
↳ Appl kernel
→ at install and remove (?)

State machine
